

UPCOMING PROJECT

Recently, the Water District was awarded a \$147,500 loan and a \$102,500 grant from the Missouri Department of Natural Resources Drinking Water State Revolving Fund Program. The funds will be utilized to perform excavation on District owned service lines and meter sets to classify the type of piping used and to confirm no lead pipes are in the distribution system. At the March 2026 Meeting, the Board of Directors awarded a project to Total H2O Solutions of Poplar Bluff, Missouri to perform excavation work on 232 Water District service lines. During the excavation, new District-owned service lines and meter pits will be installed using internal Capital Improvement Funds. If work is going to take place on your property, you will be receiving a notification from the office next month. The project could cause brief water interruptions even to those customers who were not affected by the project. If you have any questions about the project, feel free to reach out to District Manager Will Humphrey at 573-395-4578.
